

Did you know?

Global health data have grown exponentially in recent years...

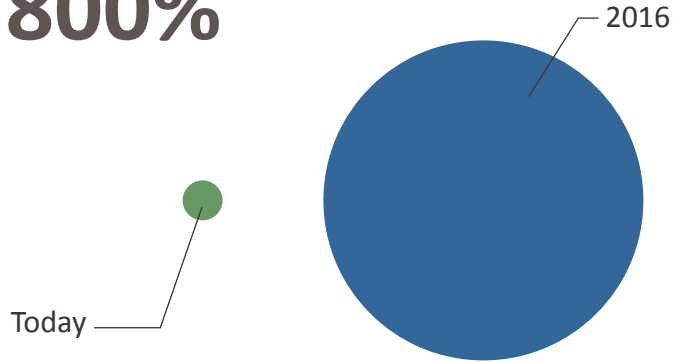

- Antibiotics
550k PubMed articles
- Vaccines
200k PubMed articles
- Neglected Diseases
360k PubMed articles
68m Google results

*National Center for Biotechnology Information

And in the next five years, Big Data are expected to grow by

800%**

**Forbes. "Big Data - Big Money Says It's a Paradigm Buster", 1/6/2012

What's the problem?

While the data and information are growing by leaps and bounds, most of it is spread across numerous disparate databases and information sources and left largely unstructured and unanalyzed.

What's the solution?

Global Health Connect brings neglected disease data together into a one-stop source.

Which provides...

- Cross-cutting research
- Historical context
- Trends
- Analytics
- Biological insights

Resulting in...

- New scientific insights into old problems
- Faster and more efficient R&D
- An environment for new players from various disciplines to participate
